

## Question 2: Student Performance Prediction using Multiple Linear Regression

### Objective

To predict students' final examination marks using Multiple Linear Regression and evaluate the model using the  $R^2$  Score.

### Output:

```
(base) bhanu@Bhanus-MacBook-Air C01-ASS1 % python student_perf.py
Actual Marks = [76 65]
Predicted Marks = [76.63575541 64.41232301]
R2 Score = 0.9876107573676807
(base) bhanu@Bhanus-MacBook-Air C01-ASS1 %
```
